## What do we do?

Streaming Defense streams all network connections to a geo-spatially accurate map of the world, instantly identifying and contextualizing risky activity using advanced AI and threat intelligence.

We provide organisations with critical insights and advanced tools to effectively defend against evolving cyber threats.

With state-of-the-art threat detection capabilities, true real-time monitoring, and expert support, Streaming Defense empowers our clients to safeguard their digital assets, protect sensitive client information, and maintain the trust and confidence of our clients.

---

# Introduction

In a world where we are constantly striving to stay ahead of cyber threats, organizations face unprecedented cybersecurity challenges. As technology advances, so too do the methods and strategies employed by cybercriminals.

These malicious actors are continuously refining their tactics, exploiting vulnerabilities with increasing sophistication and frequency.

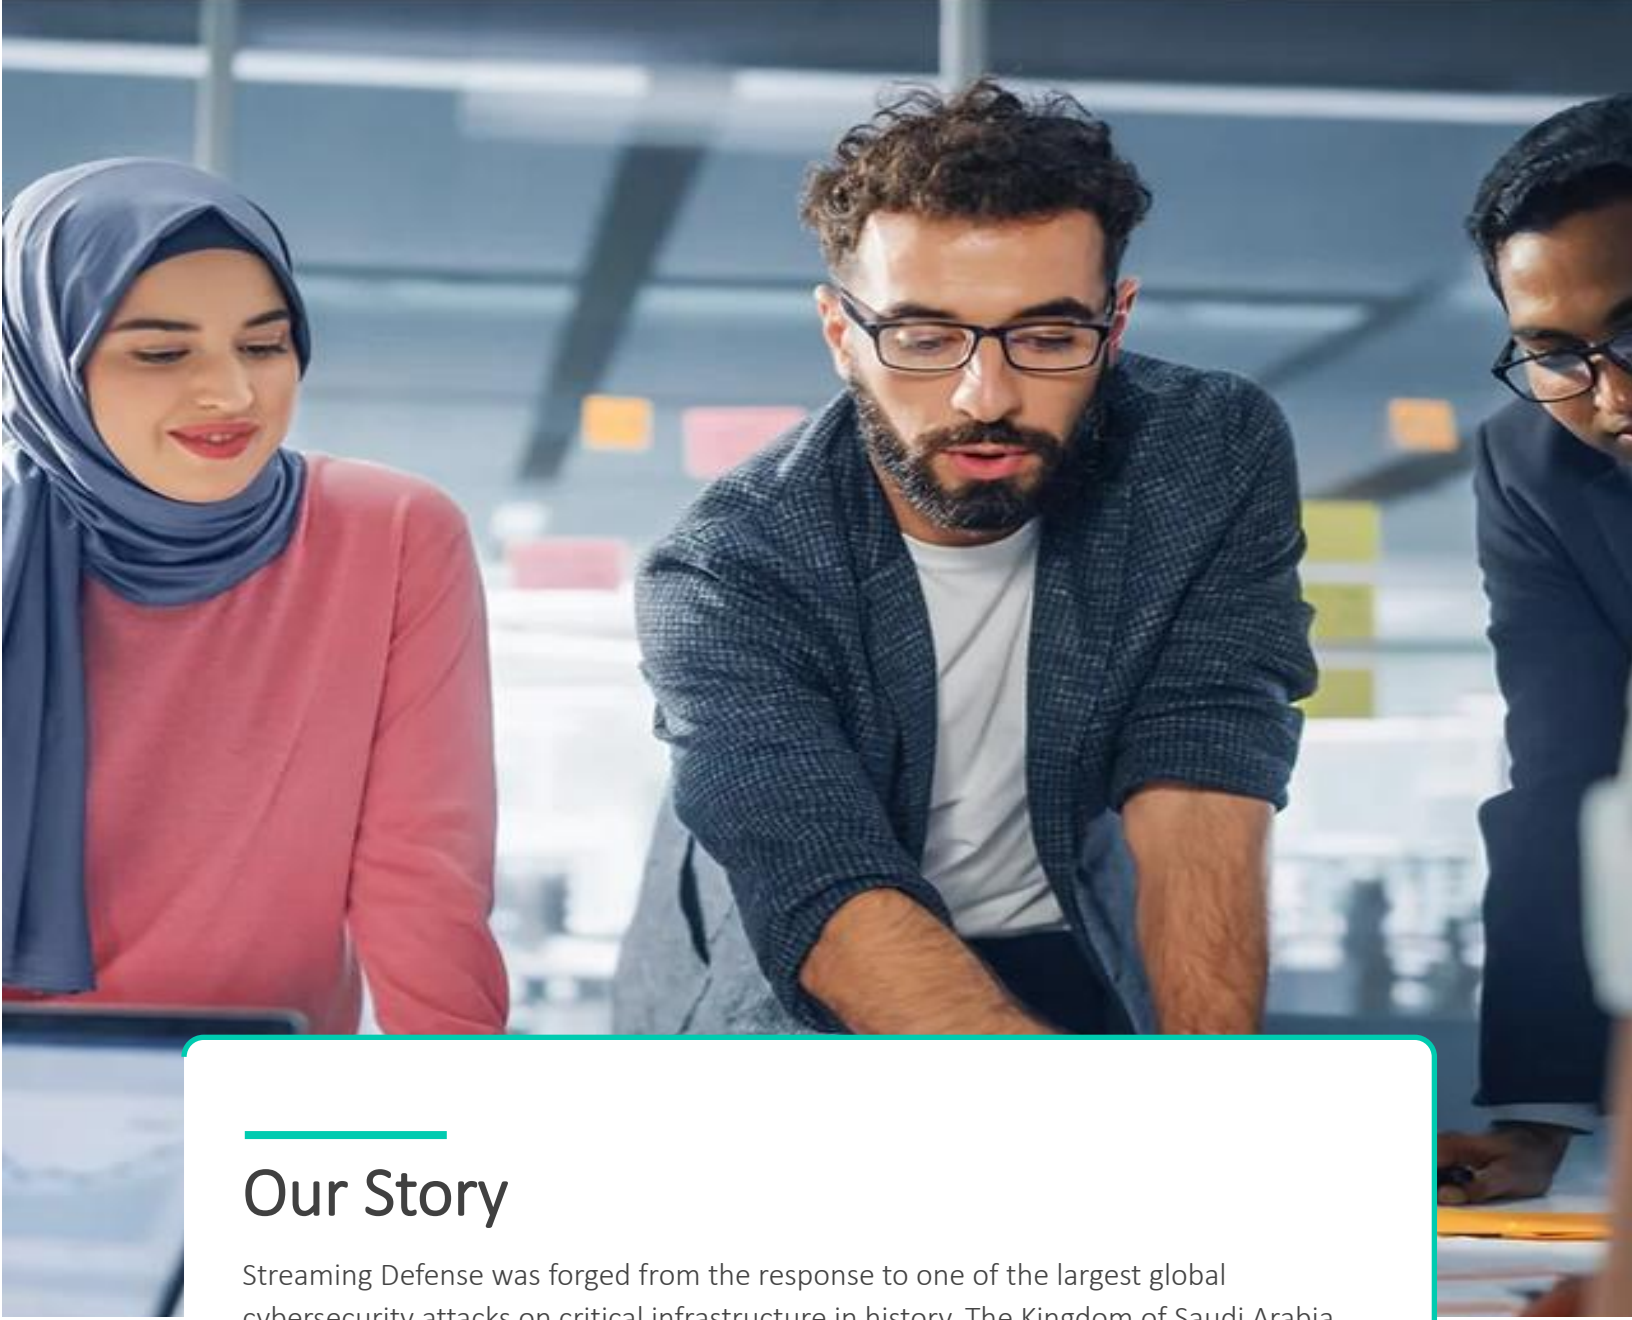

This relentless evolution of cyber threats makes it imperative for businesses to adopt advanced, proactive security measures to stay ahead of potential attacks.

This dynamic and ever-changing landscape requires organizations to be more vigilant and innovative in their cybersecurity approaches.

Streaming Defense stands at the forefront of cybersecurity innovation, offering real-time threat detection and response solutions designed to safeguard your digital assets, ensure compliance, and provide peace of mind.

Our state-of-the-art technology continuously monitors your systems, identifying and neutralizing threats before they can cause harm.

With Streaming Defense, you can trust that your data and systems are secure, allowing you to concentrate on driving your business forward without the constant worry of cyber-attacks

---

## Our Story

Streaming Defense was forged from the response to one of the largest global cybersecurity attacks on critical infrastructure in history. The Kingdom of Saudi Arabia retained our founders to help solve this problem and create a world class national cyber defense capability.

The resulting \$Billion+ investment transformed the Kingdom's UN Global Cybersecurity Index position from #46 to #2 second only to the USA.

Our pivotal role in this project catalyzed the inception and subsequent development of Streaming Defense, a cutting-edge solution poised to address a fundamental flaw in organizational cybersecurity resilience.

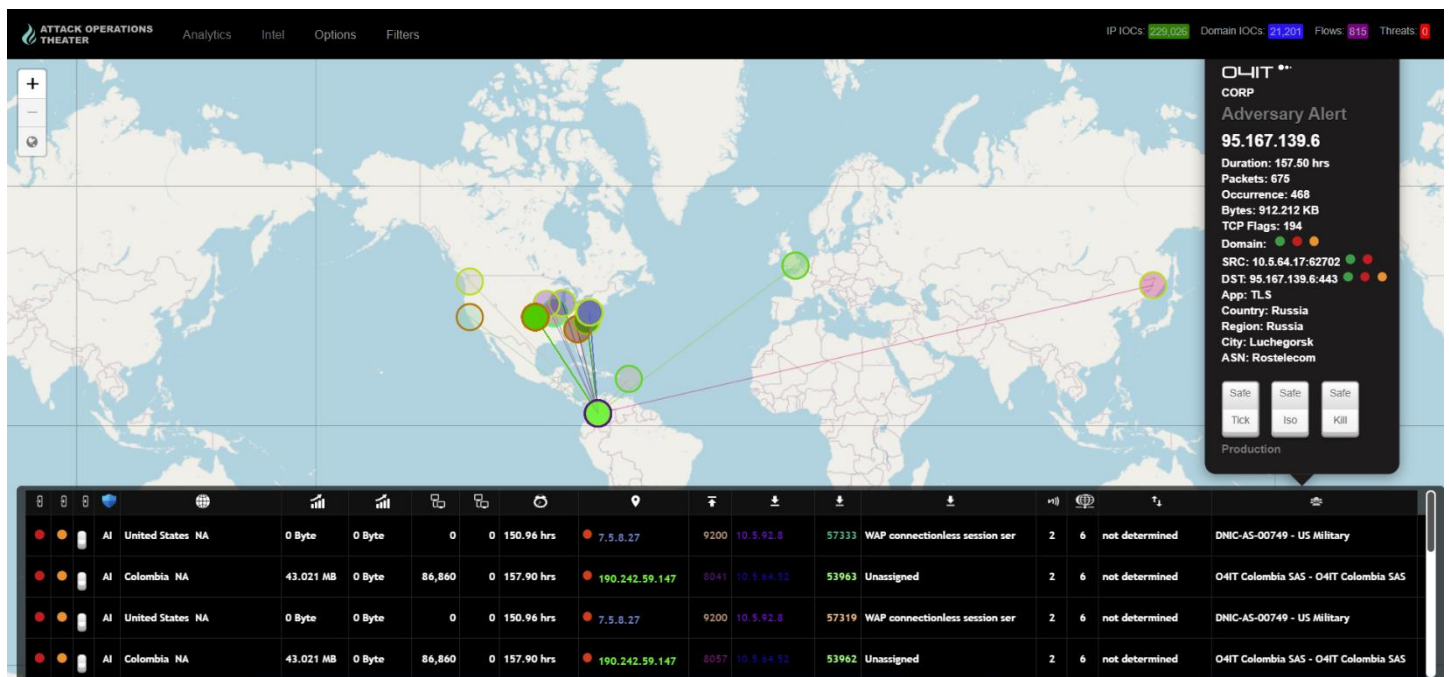

# Putting you on the Map

Our interactive map is a powerful visual tool at the heart of your network security, offering real-time, geospatial views of threats. It shows where risks originate and where they're headed, enabling quick, informed responses.

With features like one-click threat mitigation and automated alerts, the map consolidates critical threat management into a single, intuitive interface, allowing your security team to act swiftly and efficiently.

Here are some of the benefits:

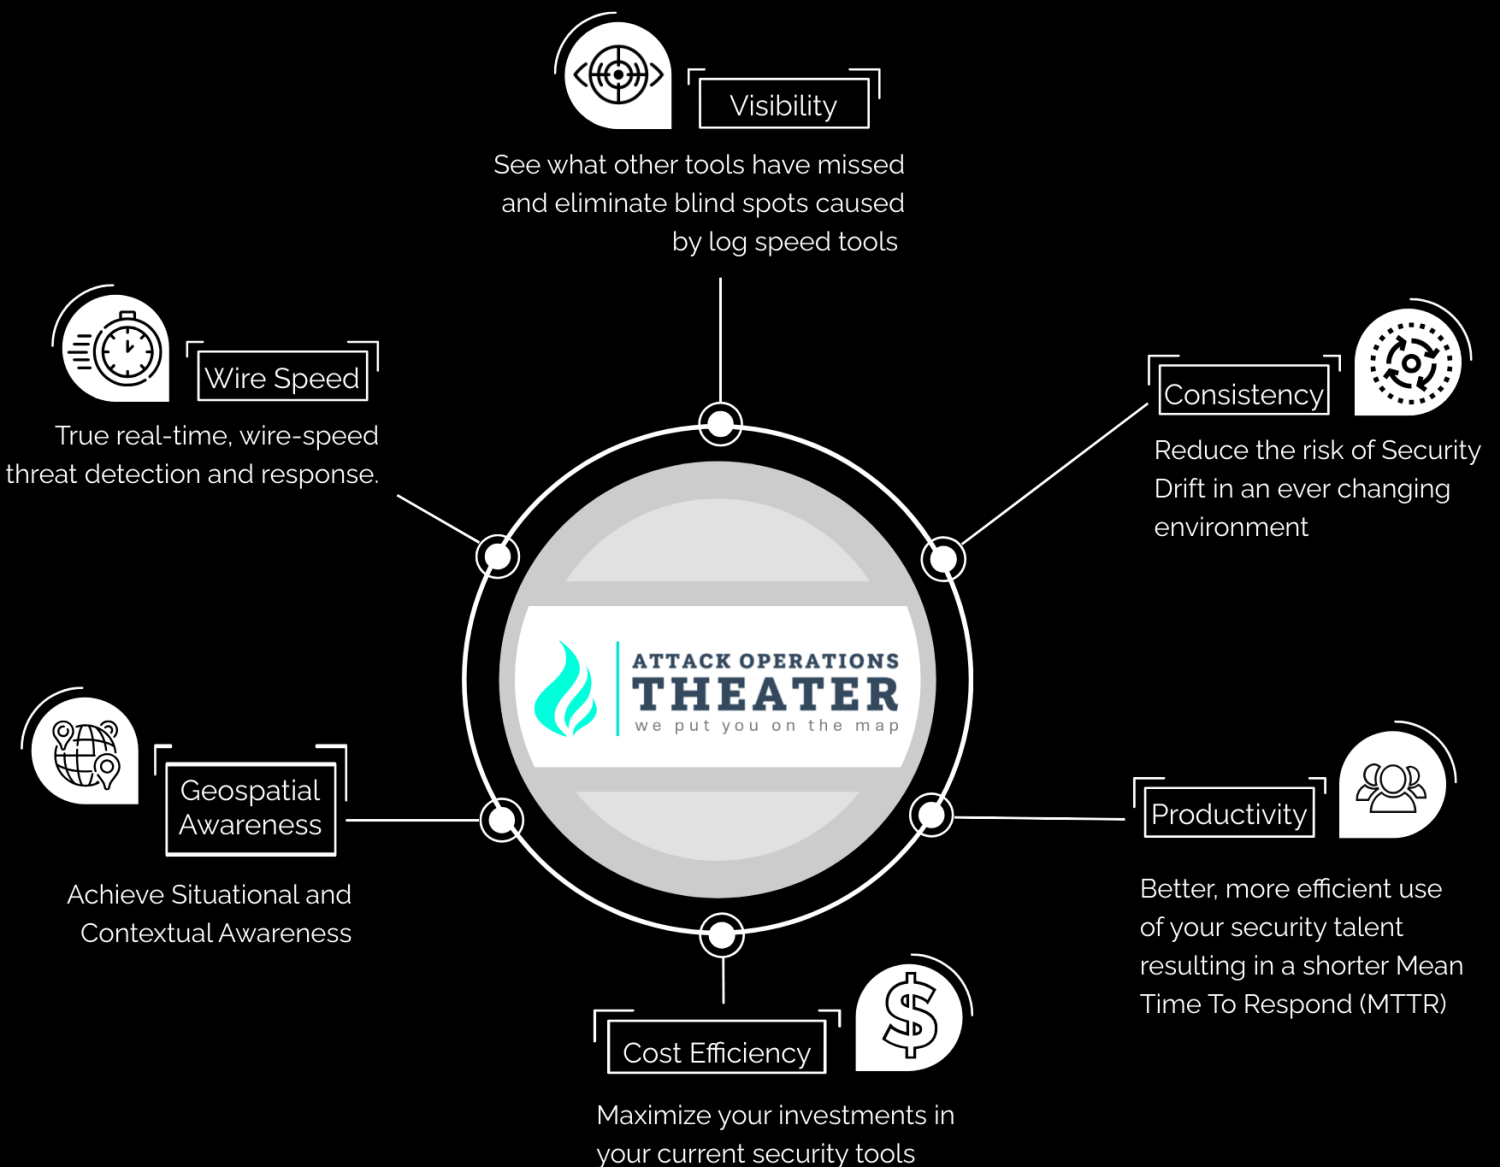

-  **Enhanced Security Response:** Benefit from immediate visibility into network threats as they happen, allowing your team to react swiftly and minimize potential damage.
-  **Improved Situational Awareness:** Gain a comprehensive understanding of threat origins and destinations with real-time geospatial analysis, helping your team make informed, strategic decisions.
-  **Efficient Threat Neutralization:** Reduce response times with one-click threat mitigation, empowering your security team to quickly and effectively eliminate risks directly from the interface.
-  **Proactive Security Management:** Stay ahead of threats with automated alerts that ensure your security team is promptly notified of any risks, reducing the chance of threats going unnoticed.
-  **Streamlined Incident Handling:** Optimize your incident response process with an integrated, automated ticketing system, simplifying management, and enhancing collaboration within your security team.

# From SOC to AOT

At Streaming Defense, we elevate traditional Security Operations Centers (SOC) into proactive **Attack Operations Theaters** (AOT), enhancing our clients' cybersecurity management. This upgrade allows for real-time visualization and immediate threat response, drastically improving decision-making speeds and defensive outcomes.

By actively engaging threats as they emerge, the AOT not only defends but anticipates, leading to more efficient and effective security operations. This proactive approach ensures our clients are equipped to handle the evolving dynamics of cyber threats with superior agility and control.

---

# Customer Benefits

**Faster Response Time (MTTR):** Reduced latency in identifying, containing and responding to attacks (Mean Time to Respond (MTTR)). The only solution to offer a 'Kill Switch' that allows immediate termination of confirmed attacks – meaning we stop it before it propagates and becomes a breach.

**Increased Productivity:** Significantly improved and automated user experience (UX/AX) results in faster and more robust productivity. This results in delivers efficiency gains, reducing total cost of ownership and maximizing ROI.

**Reduced Risk of Breaches:** By providing real-time detection and automated response, Streaming Defense significantly lowers the risk of successful cyber-attacks and data breaches.

**Enhanced Operational Efficiency:** Security teams benefit from reduced data overload and prioritized threat alerts, enabling them to focus on critical incidents and respond more effectively.

**Improved Compliance:** Streaming Defense helps organizations meet regulatory requirements by ensuring robust network security and comprehensive threat monitoring.

**Cost-Effective Security:** With scalable deployment options and automated threat mitigation, organizations can achieve high levels of security without incurring excessive costs.

## See the attack

For the first time, organisations have full and immediate network visibility

## Contain the attack

Significantly improved and automated user experience (UX/AX) results in faster and more robust productivity

## Stop it before it propagates

Kill switch allows immediate termination of confirmed attacks

---

## What our customers are saying

“Streaming Defense offers exceptional visibility into network traffic, enabling rapid identification and response to attacks. It helps our clients leverage threat intelligence effectively and deploys quickly, often detecting malicious activity missed by other tools. With real-time visibility and full capture capabilities, you can swiftly analyze and respond to early-stage attacks before they become significant issues.”

**Neil Anderson, Bastion Networks**

"The Streaming Defense Platform has greatly enhanced our threat detection, alert triage and remediation by detecting and streaming threat data graphically displaying incoming threats at the network boundary. I would recommend its adoption and implementation to any organization to strengthen their cyber intel capability and defense.”

**Eamonn Keane, Systal Technology Solutions**

# Meet the Executive Team

Streaming Defense's executive team is comprised of industry leaders with decades of experience in defense, technology, and cybersecurity. Our seasoned professionals drive innovation, growth, and excellence, ensuring that Streaming Defense remains a trusted and forward-thinking partner in the industry.

Together, we are committed to navigating today's complex landscape and delivering exceptional value to our clients and stakeholders.

**Mike Loginov**  
CEO

**David Cox**  
President

**Tom Miller**
